Received 2022 October 6; published 2022 November 11

Due to an error at the publisher two symbol errors were introduced.

1. In Section 3.1, in list item 1 “Data samples that are similar in a sufficiently large amount of independent dimensions ($N \ll$) tend to be similar also when considering an additional independent dimension ($N + 1$),” the \ll symbol should be replaced by \gg .
2. In Section 3.2.1, paragraph 3, in “Conversely, the magnitude of a source would not play any role when trying to identify the “most similar” data points in the N -dimensional space, as $|d_1^j - d_1^0| \ll |d_2^j - d_2^0|$,” the \ll symbol should be replaced by \gg .

IOP Publishing sincerely regrets these errors.
